

ARSHAD

Backend / SDE Intern Candidate

Delhi NCR, India | +91 9650219912 | arshad9922ali@gmail.com | [LinkedIn](#) | GitHub: [kentakaa](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Final-year Backend Development student (TISS SSE) seeking an SDE / Backend Engineering internship. Shipped three production systems end-to-end (Spring Boot/WebSockets, PHP/MariaDB, Spring Boot/MongoDB Atlas), and brings hands-on experience building a GenAI/RAG pipeline (LangChain, HuggingFace, Gemini). Comfortable with REST API design, event-driven backend logic, and relational + NoSQL databases.

TECHNICAL SKILLS

- **Languages:** Java, Python, PHP, JavaScript, C, HTML5, CSS3
- **Backend & APIs:** Spring Boot, Spring Security, Spring MVC, RESTful API Design, Native WebSockets, Event-Driven Architecture
- **Databases:** MongoDB (Atlas), MySQL, MariaDB, PostgreSQL/pgvector, FAISS
- **GenAI / RAG:** LangChain, HuggingFace, Google Gemini API, FAISS, MongoDB Atlas Vector Search
- **Reliability & Security:** Bean Validation, CORS Configuration, IP-Based Rate Limiting, Global Exception Handling, Health Checks
- **Testing & Tools:** JUnit, Postman, Git/GitHub, GitHub CLI, Docker, Maven, Gradle, Ubuntu Linux (CLI), OpenCode & Antigravity (agentic CLI tools)

SELECTED PROJECTS

End-to-End RAG Pipeline *(Independent)*

Python, LangChain, HuggingFace, Google Gemini API, FAISS

- Built a full retrieval-augmented generation pipeline covering ingestion, chunking, embedding, vector storage, and generation.
- Used HuggingFace models for embeddings and the Gemini API for generation, orchestrated through LangChain.
- Implemented FAISS as a local vector store for similarity search, keeping the stack fully self-hosted.

Real-Time Enterprise Messaging Engine *(Deployed)*

Java, Spring Boot, WebSockets, MongoDB, Docker

- Migrated from STOMP to native WebSockets and built a thread-safe ConcurrentHashMap routing layer for O(1) average-case connection lookup.
- Fixed a WebSocket identity-spoofing vulnerability by binding session auth at the handshake, and root-caused a TOCTOU race condition in concurrent message handling.
- Designed a single-collection MongoDB schema supporting both direct messages and group chats; shipped via Docker/CI-CD on Render.

Full-Stack Developer Portfolio *(Deployed)*

Java, Spring Boot, MongoDB Atlas, JavaScript

- Scaffolded a layered Spring Boot backend (Controller/Service/Repository/DTO), then diagnosed and fixed a MongoDB Atlas connection failure caused by a malformed URI.
- Configured origin-restricted CORS and IP-based rate limiting; validated via PowerShell API testing and browser checks.

Hospital Management System *(Deployed)*

PHP, MariaDB, HTML5, CSS3, JavaScript

- Fixed a privilege-escalation vulnerability, broken JOIN queries, and a broken bcrypt password-hashing flow in a live MVC-restructured system.
- Recovered and rebuilt 22 missing view files from Git history, restoring core functionality before deploying on InfinityFree.

WORK EXPERIENCE

Software Development Intern — PC Training Institute (PCTIL) *Aug 2025 – Oct 2025*

- Built billing and appointment-scheduling modules of a hospital management backend in PHP/MySQL within an existing multi-module codebase.
- Optimized SQL queries and added indexing on frequently-filtered columns, speeding up appointment and billing lookups.

EDUCATION

Bachelor of Software Development — Tata Institute of Social Sciences (TISS SSE) *Expected 2027*

Mumbai, India | GPA: 8.4/10 | Relevant coursework: DSA, OOP, DBMS, Software Engineering

CERTIFICATIONS

- RAG with MongoDB — MongoDB via Credly (Aug 2026) | Software Development Job Simulation — Citi ICG Technology, via Forage (Apr 2026)
